RE: Anaconda Carr Fork Conceptual
Reclamation/Stabilization Plan

Dear Mr. Buck:

We have reviewed the conceptual reclamation/stabilization plan for the Anaconda Carr Fork property. This plan was received by this office on August 28, 1985.

The plan as submitted appears to contain proposed action needed to resolve the concerns of this Bureau. However, the following minor points should be considered in the development of the final reclamation/stabilization plan in order to insure completeness of the final document:

1. Sampling referenced in paragraph 4.3.6 should be expanded to include the sediments in the treatment/tailings ponds. Sampling should be done for any pollutants which may enter the surface or groundwater.
2. Specific methods for protecting the groundwater from contamination due to percolation of surface water through tailings or pond sediment should be addressed.

We look forward to receiving a copy of the final reclamation /stabilization plan. Should you have any questions concerning this memo or related to water pollution, please contact me.

Sincerely,

Leland Myers, P.E.
Environmental Engineer
Bureau of Water Pollution Control
